1 About This Manual

1.1 Scope

This manual describes how to install your KVM Extender, how to operate it and how to perform trouble shooting.

1.2 Validity

This manual is valid for all devices listed on the front page. The product code is printed on the base of the devices.

1.3 Cautions and Notes

The following symbols are used in this manual:

This symbol indicates an important operating instruction that should be followed to avoid any potential damage to hardware or property, loss of data, or personal injury.

This symbol indicates important information to help you make the best use of this product.

2 Safety Instructions

To ensure reliable and safe long-term operation of your KVM Extender please note the following guidelines:

Installation

- ➔ Only use in dry, indoor environments.
- ➔ The KVM Extender and the power supply units can get warm. Do not situate them in an enclosed space without any airflow.
- ➔ Do not place the power supply directly on top of the device.
- ➔ Do not obscure ventilation holes.
- ➔ Only use power supplies originally supplied with the product or manufacturer-approved replacements. Do not use a power supply if it appears to be defective or has a damaged case.
- ➔ Connect all power supplies to grounded outlets. In each case, ensure that the ground connection is maintained from the outlet socket through to the power supply's AC power input.
- ➔ Do not connect the link interface to any other equipment, particularly network or telecommunications equipment.
- ➔ Take any required ESD precautions.

Repair

- ➔ Do not attempt to open or repair a power supply unit.
- ➔ Do not attempt to open or repair the KVM Extender. There are no user serviceable parts inside.
- ➔ Please contact your dealer or manufacturer if there is a fault.

3 Description

3.1 Application

The KVM Extender is used to increase the distance between a source (computer, CPU) and its console (keyboard, mouse, and other peripheral devices).

The KVM Extender is designed for use with Cat X (Twisted Pair) interconnect cables.

The KVM Extender is unsuitable for connection between buildings where a fiber optic based product should be used instead.

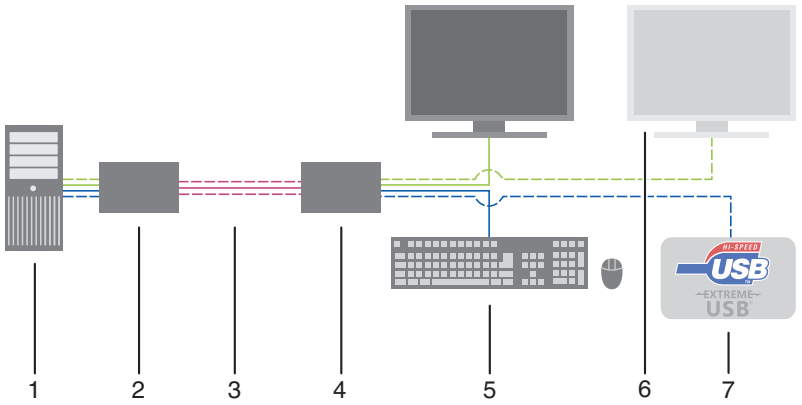
3.2 System Overview

The KVM Extender consists of a CPU Unit and a console unit (CON Unit).

The CPU Unit is connected directly to the source (computer, CPU) using the supplied cables.

The CON Unit is connected to the console (monitor, keyboard and mouse).

The CPU Unit and the CON Unit communicate with each other through the interconnect cables.



System overview

1 Source (computer, CPU)
2 KVM Extender CPU Unit
3 Interconnect cable
4 KVM Extender CON Unit
5 Console (monitor, keyboard, mouse)
6 Second monitor (option, only with Dual-Head devices)
7 USB 2.0 devices (option, only with USB 2.0 devices)

See Chapter 4.3, Page 20 for installation examples.

3.3 Product Range

Model	Description
K473-SSH	Single-Head KVM Extender for 1x DVI Single Link (up to 1920x1200), 2x USB-HID (keyboard / mouse)
K473-DSH	Dual-Head KVM Extender for 2x DVI Single Link (up to 1920x1200), 4x USB-HID (keyboard / mouse)
K473-SST	Single-Head KVM Extender for 1x DVI Single Link (up to 1920x1200), 4x USB 2.0 (transparent)
K473-DST	Dual-Head KVM Extender for 2x DVI Single Link (up to 1920x1200), 2x USB-HID (keyboard / mouse), 4x USB 2.0 (transparent)

3.4 Rack Mount Kits

Model	Description
473-5G	19"/1U rack mount kit to mount up to 5 Single-Head devices or up to 2 Dual-Head CON Units
473-DG	19"/1U rack mount kit to mount up to 5 Dual-Head CPU Units
473-1K	Mounting plate to mount by screws (Single-Head units and Dual-Head CPU Units)
473-2K	Mounting plate to mount by snap on (Single-Head units und Dual-Head CPU Units)
473-1G	Mounting plate to mount by screws (Dual-Head CON Units)
473-2G	Mounting plate to mount by snap on (Dual-Head CON Units)

3.5 Accessories

Model	Description
260-5U	International power supply unit 100...240VAC / 5VDC / 4 A
445-2X	DVI-D splitter cable
473-S30	Cat 5e simplex cable; Leoni Kerpen; length 30 m
473-S40	Cat 5e simplex cable; Leoni Kerpen; length 40 m
473-S50	Cat 5e simplex cable; Leoni Kerpen; length 50 m

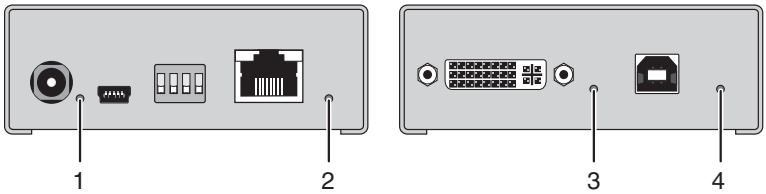
8 Connect to interconnect cable 1

3.7 Diagnostics

The KVM Extender is fitted with the following LEDs for status indication at CPU Unit and CON Unit:

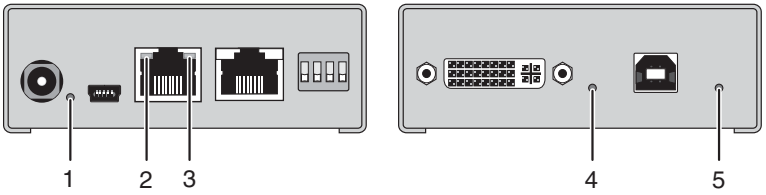
Devices with USB-HID (CPU Unit and CON Unit)



Rear View *Front View*

Pos.	LED	Status	Diagnostics
1	**Power** (red)	off	Device not ready
		on	Device ready
2	**Link Status** (green)	off	No connection via interconnect cable
		on	Connection available
3	**Video OK** (green)	off	• CPU Unit: No DVI signal from video source (computer, CPU) detected • CON Unit: No DVI signal from CPU Unit or no monitor detected
		on	DVI signal from video source available
		flashing	Monitor DDC is being transmitted from the console monitor
4	**USB Status** (green)	off	No USB connection
		on	USB connection available

Devices with USB 2.0 (CPU Unit and CON Unit)



Rear View *Front View*

Pos.	LED	Status	Diagnostics
1	**Power** (red)	off	Device not ready
		on	Device ready
2	**Link Status USB** (green)	off	No connection via interconnect cable
		on	Connection available
		flashing	No USB host found
3	**Link Status Video** (green)	off	No connection via interconnect cable
		on	Connection via interconnect cable
4	**Video OK** (green)	off	• CPU Unit: No DVI signal from video source (computer, CPU) detected • CON Unit: No DVI signal from CPU Unit or no monitor detected
		on	DVI signal from video source available
		flashing	Monitor DDC is being transmitted from the console monitor
5	**USB Status** (green)	off	No USB connection
		on	USB connection available

4 Installation

4.1 Package Contents

You should receive the following items in your extender package:

- KVM Extender pair (CPU Unit and CON Unit)
- 2x 5VDC international power supply unit
- 2x country specific power cord
- Quick Setup
- DVI video cable (1,8 m, DVI-D male-to-male)

- USB cable (1,8 m, USB type A to type B)

Additional content for Dual-Head devices:

- DVI video cable (1,8 m, DVI-D male-to-male)

- USB cable (1,8 m, USB type A to type B)

If anything is missing, contact your dealer.

4.2 System Setup

First time users are recommended to setup the system with the CPU Unit and the CON Unit in the same room as a test setup. This will allow you to identify and solve any cabling problems, and experiment with your system more conveniently.

➔ Please verify that interconnect cables, interfaces, and handling of the devices comply with the requirements (see Chapter 7, Page 29).

1. Switch off all devices.

CON Unit Installation

2. Connect your monitor(s), keyboard and mouse to the CON Unit.
3. Connect the CON Unit with the interconnect cable(s).
4. Connect the 5VDC power supply to the CON Unit.

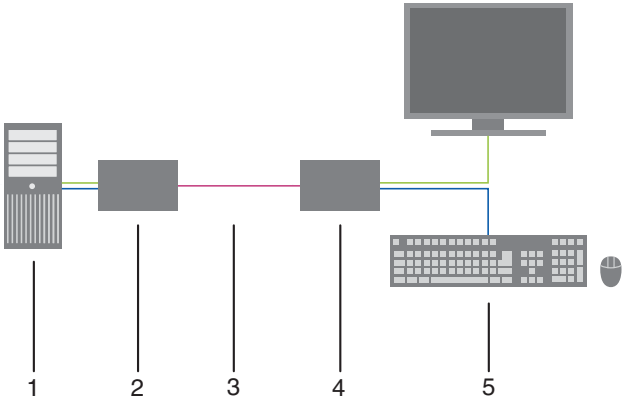
CPU Unit Installation

5. Connect the source (computer, CPU) with the supplied cables to the CPU Unit. Please ensure the cables are not strained.
6. Connect the CPU Unit to the interconnect cable(s).
7. Connect the 5VDC power supply to the CPU Unit.
8. Power up the system.

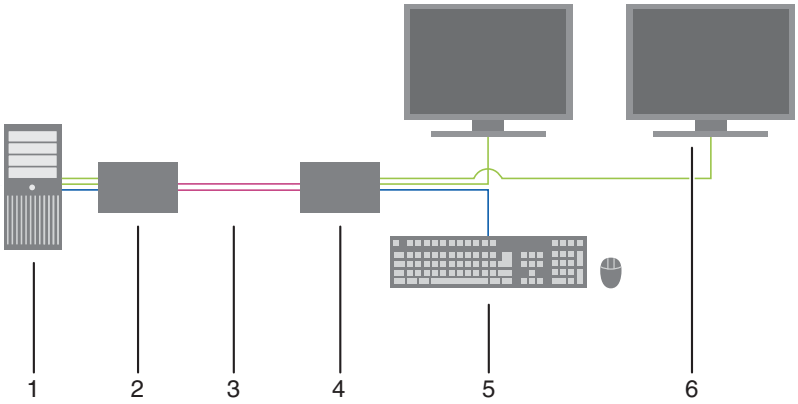
To power up the system, the following sequence is recommended: Monitor – CON Unit – CPU Unit – source.

4.3 Example Applications

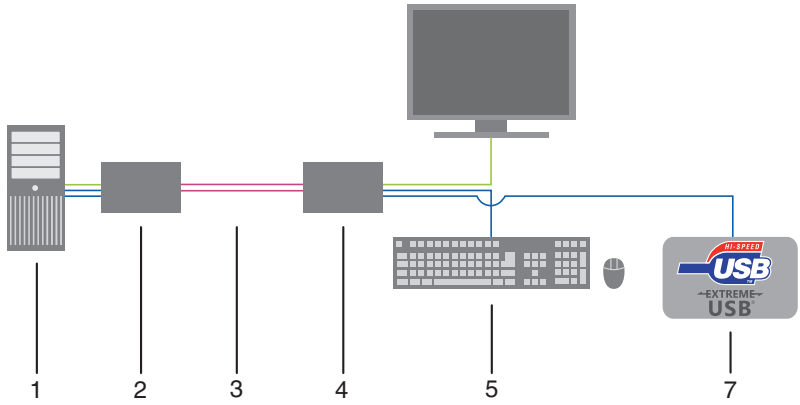
This section illustrates typical installations of KVM Extenders:



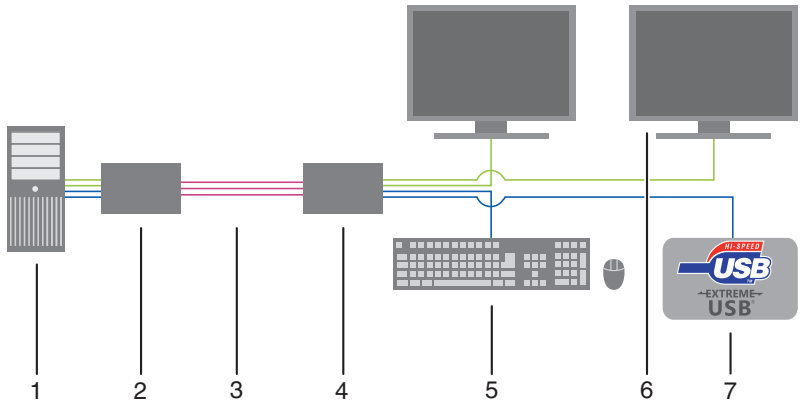
KVM Extender (Single-Head)



KVM Extender (Dual-Head)



KVM Extender (Single-Head with USB 2.0)



KVM Extender (Dual-Head with USB 2.0)

1 Source (computer, CPU)
2 KVM Extender CPU Unit
3 Interconnect cable
4 KVM Extender CON Unit
5 Console (monitor, keyboard, mouse)
6 Second monitor (option, only with Dual-Head devices)
7 USB 2.0 devices (option, only with USB 2.0 devices)

5 Configuration

5.1 Transmission Parameters

By default, the device will automatically adapt to optimize video quality. This configuration is suitable for almost all conditions and should only be modified if video quality is not satisfactory.

In case of video interference, an automatic readjustment can be initiated by entering a keyboard command (see Chapter 6.1, Page 27). Please note that this feature is not available on model K473-SST.

5.1.1 Adjustment of Video Resolution

The CPU Unit can be adjusted for the video resolution used with the following DIP switch settings:

CPU Unit

DIP	Function
Switch Position	Switch down Switch up Not used
	Automatic adjustment (default)
	Resolution up to 1280x1024
	Resolution greater than 1280x1024
	Configuration for maximum distance transmission, independent of monitor resolution

5.1.2 Adjustment of Cable Length

The CON Unit can be adapted for the current interconnect cable length with the following DIP switch settings:

CON Unit

DIP	Function
Switch Position	Switch down Switch up Not used
	Automatic adjustment (default)
	Cable length exceeds 10 m
	Cable length exceeds 20 m
	Maximum cable length: Use this setting if you are exceeding the maximum recommended cable length or if the video quality is not acceptable with automatic adjustment.

Cable lengths refer to Cat X solid-core cable type AWG24.

Using flexible stranded cables (patch cables) of type AWG26/8 is possible, however the maximum possible extension distance is halved.

➔ Change your DIP switch settings.

5.2 DDC Settings

By default, the device sends the factory preset DDC information to the CPU. This information is sufficient in most cases.

CPU Unit and CON Unit offer the following DIP switch settings to control the administration of the DDC information:

CPU Unit

DIP	Function
Switch Position	Switch down Switch up Not used
	Send stored DDC information to CPU (default: factory preset DDC information). Allow reading of DDC information from the attached monitor.
	Reset and only ever send the factory default DDC information

CON Unit

DIP	Function
Switch Position	Switch down Switch up Not used
	Prevent reading of DDC information from the attached monitor
	Allow reading of DDC information from the attached monitor

Reading of DDC information is performed during operation (see Chapter 6.2, Page 27).

If DIP switch **3** on the CPU Unit is in upper position the CPU will only ever be sent the factory preset DDC information.

5.3 Selection of Operation Mode

At CPU Unit and CON Unit you can select the operation mode with the following DIP switch settings:

CPU Unit and CON Unit

DIP	Function
Switch Position	Switch down Switch up No used
	Standard operation (default)
	Test mode Devices before 2010: Update mode activated

During standard operation, DIP switch **4** must stay in the down position.

5.4 Command Mode

During normal use, the console keyboard functions in the usual manner. However, for all KVM Extenders with USB-HID support, you can set the keyboard into a Command Mode by using a specific 'Hot Key' sequence. While in Command Mode, several functions are performed via keyboard commands. To exit Command Mode, press <Esc>.

While in Command Mode, the LEDs **Shift** and **Scroll** on the console keyboard will flash.

In Command Mode normal keyboard and mouse operation will cease. Only selected keyboard commands are available.

The following table lists the keyboard commands to enter and to exit Command Mode and to change the 'Hot Key' sequence:

Function	Keyboard Command
Enter Command Mode (default)	2x <Left Shift> ('Hot Key')
Exit Command Mode	<Esc>
Change 'Hot Key' sequence	<Left Ctrl> + <Left Shift> + <c>, <'Hot Key' Code>, <Enter>

<Key> + <Key> Press keys simultaneously
<Key>, <Key> Press keys successively
2x <Key> Press key quickly, twice in a row (similar to a mouse double-click)

The 'Hot Key' sequence to enter Command Mode can be changed. The following table lists the 'Hot Key' Codes for the available key sequences:

'Hot Key' Code	'Hot Key'
1	<Left Ctrl> + <Left Shift> + <i>
2	2x <Scroll>
3	2x <Left Shift>
4	2x <Left Ctrl>
5	2x <Left Alt>
6	2x <Right Shift>
7	2x <Right Ctrl>
8	2x <Right Alt>

6 Operation

6.1 Readjustment of Transmission Parameters (Auto-Adjust)

On KVM Extenders with USB-HID support (not for model K473-SST), the user can initiate an automatic readjustment of transmission parameters. The KVM Extender will automatically optimize video quality.

1. Enter Command Mode (default: 2x <Left Shift>; see Chapter 5.4, Page 26).
2. Press the <a> key to start Auto-Adjust.

   The screen will blank for a short time.

   The KVM Extender will exit Command Mode.

   Transmission parameters have been readjusted. Video quality should be optimal.

6.2 Download of DDC Information

By default, the factory preset DDC information is sent to the source (computer, CPU). In some cases the factory preset DDC information may not be appropriate, so the option exits to read the actual DDC information from the attached monitor. The DIP switches have to be set correctly (see Chapter 5.2, Page 24).

There are two ways to read DDC information from the attached monitor:

- Via keyboard command during operation (see Chapter 6.2.1, Page 28).
- Reconnecting the monitor cable at the CON Unit (see Chapter 6.2.2, Page 28).

6.2.1 Download DDC via Keyboard Command

Use the following command sequence to read DDC information from the attached monitor (except for model K473-SST).

1. Enter Command Mode (default: 2x <Left Shift>; see Chapter 5.4, Page 26).
2. Press the keys <2>, <Enter> to read the DDC information from the console monitor.

   The screen will blank for a short time.

   The KVM Extender will exit Command Mode.

   The CPU will now be able to read the actual monitor DDC information and so allow the required video resolution to be selected.
3. Enter Command Mode (default: 2x <Left Shift>).
4. Press the keys <1>, <Enter>.

   The KVM Extender will exit Command Mode.

   The DDC information has been updated once. Further updates are only possible by repeating all the steps listed above or by re-attaching the monitor cable (see Chapter 6.2.2, Page 28).

6.2.2 Download DDC via DVI Cable

1. Move DIP switch **3** on the CON Unit to the upper position.
2. Please make sure that the monitor is on (**both** monitors in case of Dual-Head devices).
3. Disconnect the monitor cable from the CON Unit and connect the monitor cable again (In the case of Dual-Head devices, disconnect and connect monitor cables successively).

   The DDC information will be read from the console monitor, transmitted to the CPU Unit and stored there internally.

   To show successful reprogramming the LED **Video OK** flashes at both CON Unit and CPU Unit for about one second.

   The CPU will now be able to read the actual monitor DDC information and so allow the required video resolution to be selected.
4. Move DIP switch **3** on the CON Unit to the down position.

   Accidental download of DDC information can thus be avoided.

7 Specifications

7.1 Interfaces

7.1.1 DVI-D Single Link

The video interface supports the DVI-D protocol. All signals that comply to DVI-D Single Link norm can be transmitted. This includes e.g. monitor resolutions such as 1920x1200@60Hz, Full HD (1080p) or 2K HD (up to 2048x1152). Data rate is limited to 165 MPixel/s.

Transmission of interlaced video signals, such as 1920x1080i, cannot be guaranteed.

7.1.2 USB-HID

Our devices with an USB-HID interface support a maximum of two devices compliant with the USB-HID protocol. Each USB-HID port provides a maximum current of 100 mA.

Keyboard

Compatible with most USB keyboards. Certain keyboards with additional functions may require custom firmware to operate. Keyboards with an integral USB Hub (Mac keyboards e.g.) are also supported.

Mouse

Compatible with most 2-button, 3-button and scroll mice.

Other USB-HID devices

The proprietary USB emulation also supports certain other USB-HID devices, such as specific touch screens, graphic tablets, barcode scanners or special keyboards. Support cannot be guaranteed, however, for every USB-HID device.

Only two USB-HID devices are supported concurrently, such as keyboard and mouse or keyboard and touch screen. A hub is allowed, but it does not increase the number of HID devices allowed.
To support other USB 'non-HID' devices, such as scanners, web cams or memory devices, choose our devices with transparent USB support.

7.1.3 USB 2.0 (transparent)

KVM Extender models with transparent USB 2.0 support allow the connection of **all** types of USB 2.0 devices (without restriction). USB 2.0 data transfer is supported with USB high speed (max. 480 Mbit/s).

Each USB 2.0 port provides a maximum current of 500 mA (high power).

7.1.4 RJ45 (Interconnect)

The communication of the Cat X devices requires a 1000BASE-T connection.

Connector wiring must comply with EIA/TIA-568-B (1000BASE-T), with RJ45 connectors at both ends. All four cable wire pairs are used.

7.2 Interconnect Cable

7.2.1 Cat X

A point-to-point connection is required. Operation with several patch fields is possible. Routing over an active network component, such as an Ethernet Hub, Router or Switch, is not allowed.

➔ Avoid routing Cat X cables along power cables.

➔ If the site has 3-phase AC power, try to ensure that CPU Unit and CON Unit are on the same phase.

To maintain regulatory EMC compliance, correctly installed shielded Cat X cable must be used throughout the interconnection link.

To maintain regulatory EMC compliance, all Cat X cables need to carry ferrites on both cable ends close to the device.

Type of Interconnect Cable

The KVM Extender requires interconnect cabling specified for Gigabit Ethernet (1000BASE-T). The use of solid-core (AWG24), shielded, Cat 5e (or better) is recommended.

Cat X Solid-Core Cable AWG24	S/UTP (Cat 5e) cable according to EIA/TIA-568-B. Four pairs of wires AWG24. Connection according to EIA/TIA-568-B (1000BASE-T).
Cat X Patch Cable AWG26/8	S/UTP (Cat 5e) cable according to EIA/TIA-568-B. Four pairs of wires AWG26/8. Connection according to EIA/TIA-568-B (1000BASE-T).

The use of flexible cables (patch cables) type AWG26/8 is possible, however the maximum possible extension distance is halved.

Maximum Acceptable Cable Length

Cat X Solid-Core Cable AWG24	40 m (120 ft) at 1920x1200 and 1600x1200 50 m (150 ft) at 1280x1024 and less
Cat X Patch Cable AWG26/8	20 m (60 ft) at 1920x1200 and 1600x1200 30 m (90 ft) at 1280x1024 and less

See Chapter 7.3.3, Page 32 for a list of specifically tested cables with an optimum range.

7.3 Supported Peripherals

7.3.1 USB-HID Devices

The KVM Extender will support most USB-HID devices, including the vast majority of keyboards and mice currently on the market. Many other kinds of HID device such as bar-code scanners and touch screens may also be compatible

It is not possible to guarantee support for all available USB-HID devices. In certain cases, custom firmware may be required.

USB-HID (and other) devices that are not supported as standard will normally operate with our devices featuring transparent USB support.

Please note that concurrent operation of more than two USB-HID devices is not possible even if you use a USB hub.

7.3.2 USB 2.0 Devices

KVM Extender models featuring a transparent USB 2.0 connection use Extreme USB Technology from Icron Technologies.

This technology supports **all** types of USB 2.0 devices, however the manufacturer cannot guarantee compatibility with every device on the market. Please contact your dealer if any issues are found.

7.3.3 Interconnect Cable (Cat X)

KVM Extenders should be used with cables as described in Chapter 7.2.1, Page 31.

Internal tests showed that certain cables or cable types allow longer cable lengths.

Enhanced performance is specified using the following cables:

Resolution (at 60 Hz)	Cable Type	Cable Length
1920x1200 and 1600x1200	Leoni Kerpen Megaline AWG24	>50 m (>150 ft)
1920x1200 and 1600x1200	Leoni Kerpen Megaline AWG23	>60 m (>180 ft)

The specified cables should be available through your dealer. Other cables on the market may support operation at extended distances but such operation cannot be guaranteed.

7.4 Connector Pinouts

Connector DVI-D Single-Link

Connector Mini USB Type B

Picture	Pin	Signal	Color
	1	VCC (+5VDC)	Red
	2	Data –	White
	3	Data +	Green
	4	n.c.	–
	5	GND	Black

RJ45

Picture	Pin	Signal	Pin	Signal
	1	D1+	5	D3–
	2	D1–	6	D2–
	3	D2+	7	D4+
	4	D3+	8	D4-

Power Supply

Picture	Pin	Signal
	Inside	VCC (+5VDC)
	Outside	GND

7.5 Power Supply

Single-Head Devices

Voltage	5VDC
Power Requirement	• K473-SSH (CPU Unit and CON Unit): 5VDC / 800 mA • K473-SST (CPU Unit): 5VDC / 800 mA • K473-SST (CON Unit): 5VDC / 2.500 mA

Dual-Head Devices

Voltage	5VDC
Power Requirement	• K473-DSH (CPU Unit and CON Unit): 5VDC / 1.600 mA • K473-DST (CPU Unit): 5VDC / 1.600 mA • K473-DST (CON Unit): 5VDC / 3.300 mA

7.6 Environmental Conditions

Operating Temperature	41 to 113°F (5 to 45°C)
Storage Temperature	–13 to 140°F (–25 to 60°C)
Relative Humidity	Max. 80% non-condensing

7.7 Size

Single-Head Devices

CPU Unit / CON Unit	80 x 110 x 29 mm (3.1" x 4.3" x 1.1")
Shipping Box	210 x 140 x 165 mm (8.3" x 5.5" x 6.5")

Dual-Head Devices

CPU Unit	80 x 110 x 42 mm (3.1" x 4.3" x 1.7")
CON Unit	161 x 110 x 29 mm (6.3" x 4.3" x 1.1")
Shipping Box	460 x 250 x 120 mm (18.1" x 9.8" x 4.7")

7.8 Shipping Weight

Single-Head Devices

CPU Unit / CON Unit	0,2 kg (0.4 lb)
Shipping Box	1,7 kg (3.8 lb)

Dual-Head Devices

CPU Unit / CON Unit	0,3 kg (0.7 lb)
Shipping Box	2,2 kg (4.9 lb)

8 Troubleshooting

8.1 Blank Screen

Diagnosis	Possible Reason	Measure
LED **Power** off	Power supply	➔ Check power supply units and the connection to the mains.
LED **Link Status** off	Connection between CON Unit and CPU Unit	➔ Check interconnect cable and connections.
CPU Unit: LED **Video OK** off	No video signal detected by source (computer, CPU)	➔ Check DVI-D cable to CPU. ➔ Download DDC information from console monitor (see Chapter 6.2, Page 27). Reboot CPU if necessary.
CON Unit: LED **Video OK** off	No monitor detected	➔ Check connection, length and quality of the DVI-D cable to monitor, tighten cable thumbscrews.
	No video signal detected from CPU Unit	➔ Check connection, length and quality of interconnect cable between the units. ➔ Download DDC information from console monitors (see Chapter 6.2, Page 27). Reboot CPU if necessary.
	Suboptimal transmission parameters	➔ Execute Auto-Adjust (see Chapter 6.1, Page 27). ➔ If necessary, manually adjust parameters for monitor resolution (see Chapter 5.1.1, Page 22) and cable length (see Chapter 5.1.2, Page 23).

8.2 Video Jitter

Diagnosis	Possible Reason	Measure
Incorrect video display	Cable connection interrupted	➔ Check connection, length and quality of DVI-D cable to CPU and to monitor, tighten cable thumbscrews. ➔ Check connection, length and quality of interconnect cables between the units.
	Suboptimal transmission parameters	➔ Execute Auto-Adjust (see Chapter 6.1, Page 27). ➔ If necessary, manually adjust parameters for monitor resolution (see Chapter 5.1.1, Page 22) and cable length (see Chapter 5.1.2, Page 23).

8.3 USB-HID Failure

Diagnosis	Possible Reason	Measure
Keyboard LEDs **Shift** and **Scroll** are flashing	Keyboard in Command Mode	➔ Press <Esc> to leave Command Mode.
CPU Unit: LED **USB Status** off	No USB connection to CPU	➔ Check connection of USB cable to CPU, select another USB port if necessary. ➔ Remove USB and power cable and restart CPU. Connect power cable first.
CON Unit: LED **USB Status** off	Problems with USB connection	➔ Check connection of USB cable to USB-HID device. ➔ Remove DVI and power cable and restart CON Unit. Connect power cable first.
USB device without function	No USB-HID device	➔ Connect USB-HID device.
	USB-HID device is not supported	➔ Contact dealer if necessary.

8.4 USB 2.0 Failure

Diagnosis	Possible Reason	Measure
LED **Link Status USB** off	Connection U between CON Unit and CPU Unit	➔ Check interconnect cable U and connections.
	USB controller (CON Unit)	➔ Check LED **USB Status** at CON Unit.
LED **Link Status USB** is flashing	Source (computer, CPU)	➔ Check status (standby, sleep mode).
	USB controller (CON Unit)	➔ Check LED **USB Status** at CON Unit.
CPU Unit: LED **USB Status** off	No USB connection to CPU	➔ Check connection of USB cable to CPU, select another USB port if necessary. ➔ Remove USB and power cable and restart CPU Unit. Connect power cable first.
CON Unit: LED **USB Status** off	Problem with USB connection	➔ Check connection of USB cable to USB-HID device. ➔ Remove DVI and power cables and restart CON Unit. Connect power cable first.
USB device without function	Device not detected by CPU	➔ Check installation including required drivers. ➔ Reconnect USB device. ➔ Contact dealer if necessary.

9 Technical Support

Prior to contacting support please ensure you have read this manual, and then installed and set-up your KVM Extender as recommended.

9.1 Support Checklist

To efficiently handle your request it is necessary to complete our checklist for support and problem cases (Download). Keep the following information available before you call:

- Company, name, phone number and email
- Type and serial number of the device (see bottom of device)
- Date and number of sales receipt, name of dealer if necessary
- Issue date of the existing manual
- Nature, circumstances and duration of the problem
- Involved components (such as graphic source/CPU, OS, graphic card, monitor, USB-HID/USB 2.0 devices, interconnect cable) including manufacturer and model number
- Results from any testing you have done

9.2 Shipping Checklist

1. To return your device, contact your dealer to obtain a RMA number (Return-Material-Authorization).
2. Package your devices carefully, preferably using the original box. Add all pieces which you received originally.
3. Note your RMA number visibly on your shipment.

Devices that are sent in without a RMA number cannot be accepted. The shipment will be sent back without being opened, postage unpaid.

10 Regulatory and Standards Compliance

10.1 CE Declaration Of Conformity

The products listed below in the form as delivered comply with the provisions of the following European Directives:

2004/108/EG Council Directive on the approximation of the laws of the Member States relating to electromagnetic compatibility

CE Marking 2009

Product list:

K473-SSH, K473-DSH, K473-SST, K473-DST

The products comply with the following harmonized standards for Information Technology Equipment:

- EN 55022:2006 + A1:2007 (Class A)
- EN 55024:1998 + A1:2001 + A2:2003

This declaration certifies the conformity to the specified directives but contains no assurance of properties. The safety instructions and installation guidelines noted in this manual shall be considered in detail. Compliance with the specifications for cable lengths and types is mandatory.

Manufacturer:

IHSE GmbH
Maybachstrasse 11
88094 Oberteuringen
Deutschland

Oberteuringen, 26 January 2010

The Management

Use in a Domestic Environment

This is a Class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

10.2 North American Regulatory Compliance

This equipment has been found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Shielded cables must be used with this equipment to maintain compliance with radio frequency energy emission regulations and ensure a suitably high level of immunity to electromagnetic disturbances.

All power supplies are certified to the relevant major international safety standards.

10.3 WEEE

The manufacturer complies with the EC Directive 2002/96/EG on the prevention of waste electrical and electronic equipment (WEEE).

The device labels carry a respective marking.

10.4 RoHS

This device complies with the EC Directive 2002/95/EG on the Restriction of the use of certain Hazardous Substances in electrical and electronic equipment (RoHS).

The device labels carry a respective marking.

11 Glossary

The following terms are commonly used in this guide or in video and KVM technology:

Term	Explanation
Cat X	Any Cat 5e (Cat 6, Cat 7) cable
CGA	The Color Graphics Adapter (CGA) is an old analog graphic standard with up to 16 displayable colors and a maximum resolution of 640x400 pixels.
Component Video	The Component Video (YPbPr) is a high-quality video standard that consists of three independently and separately transmittable video signals, the luminance signal and two color difference signals.
Composite Video	The Composite Video is also called FBAS and it is part of the PAL TV standard.
CON Unit	Component of a KVM Extender or Media Extender to connect to the console (monitor(s), keyboard and mouse; optionally also with USB 2.0 devices)
CPU Unit	Component of a KVM Extender or Media Extender to connect to a source (computer, CPU)
DDC	The Display Data Channel (DDC) is a serial communication interface between monitor and source (computer, CPU. It allows a data exchange via monitor cable and an automatic installation and configuration of a monitor driver by the operating system.
Dual Access	A system to operate a source (computer, CPU) from two consoles
Dual-Head	A system with two video connections
Dual-Link	A DVI-D interface for resolutions up to 2560x2048 by signal transmission of up to 330 MPixel/s (24-bit)
DVI	Digital video standard, introduced by the Digital Display Working Group (http://www.ddwg.org). Single Link and Dual Link standard are distinguished. The signals have TMDS level.
DVI-I	A combined signal (digital and analog) that allows running a VGA monitor at a DVI-I port – in contrast to DVI-D (see DVI).
Fiber	Single-mode or multi-mode fiber cables

Term	Explanation
EGA	The Enhanced Graphics Adapter (EGA) is an old analog graphic standard, introduced by IBM in 1984. A D-Sub 9 connector is used for connection.
FBAS	The analog color video baseband signal (FBAS) is also called Composite Video and it is part of the PAL TV standard.
Console	Keyboard, mouse and monitor
KVM	Keyboard, video and mouse
Mini-XLR	Industrial standard for electrical plug connections (3 pole) for the transmission of digital audio and control signals
Multi-mode	62.5µ multi-mode fiber cable or 50µ multi-mode fiber cable
OSD	The On-Screen-Display is used to display information or to operate a device.
Quad-Head	A system with four video connections
RCA (Cinch)	A not standardized plug connection for transmission of electrical audio and video signals, especially with coaxial cables
SFP	SFPs (Small Form Factor Pluggable) are pluggable interface modules for Gigabit connections. SFP modules are available for Cat X and fiber interconnect cables.
Single-Head	A system with one video connection
Single Link	A DVI-D interface for resolutions up to 1920x1200 by signal transmission of up to 165 MPixel/s (24-bit). Alternative frequencies are Full HD (1080p), 2K HD (2048x1080) and 2048x1152.
Single-mode	9µ single-mode fiber cable
S-Video (Y/C)	The S-Video (Y/C) is a video format transmitting luminance and chrominance signals separately. Thereby it has a higher quality standard than FBAS.
TOSLINK	Standardized fiber connection system for digital transmission of audio signals (F05 plug connection)
Triple-Head	A system with three video connections

Term	Explanation
USB-HID	USB-HID devices (Human Interface Device) allow for data input. There is no need for a special driver during installation; "New USB-HID device found" is reported. Typical HID devices include keyboards, mice, graphics tablets and touch screens. Storage, video and audio devices are **not** HID.
VGA	Video Graphics Array (VGA) is a computer graphics standard with a typical resolution of 640x480 pixels and up to 262,144 colors. It can be seen as a follower of the graphics standards MDA, CGA and EGA.
